Professional Summary

Tech Lead with 8+ years of experience building scalable FinTech platforms and production-grade AI systems. Ranked in the Top 9% of the Andela AI Engineering Bootcamp for work in LLM orchestration, agent-based systems, and RAG optimization. Specialized in backend engineering (FastAPI, Spring Boot), cloud-native architectures (AWS, Terraform), and applied AI systems using LangGraph, MCP, and multi-agent workflows. Built distributed financial systems processing **8M+ monthly transactions** with **99.9% uptime**, focused on reliability, scalability, and production performance.

Skills

AI & LLM Systems:

LangGraph, MCP, LangSmith, RAG pipelines, LLM evaluation, prompt engineering, HITL workflows

AI & Data Systems:

OpenRouter, Ollama, Redis Streams, ChromaDB, Weaviate, Hugging Face, MLflow

Frontend

React, Next.js, TypeScript, Streamlit, Gradio, dashboards

Cloud & DevOps:

AWS (Lambda, ECS, ECR, Aurora, Bedrock, Cognito), Terraform, Docker, GitHub Actions, Jenkins, GitLab CI/CD, Prometheus, Grafana

Backend Engineering:

Python (FastAPI), Java (Spring Boot), Kafka, Redis, PostgreSQL, MySQL, MongoDB, REST/SOAP APIs, OAuth2/JWT, RBAC

Engineering Practices:

CI/CD, event-driven architecture, ETL pipelines, system design, agile delivery, technical mentorship

Work Experience

Senior Software Engineer(Acting Tech Lead),

Kacha Digital Financial Service S.C

12/2023 – Present

Addis Ababa, Ethiopia

- Led development of a Core Credit Scoring API for real-time financial risk assessment.
- Built USSD and wallet systems processing **8M+ monthly transactions with 99.9% uptime**.
- Improved API performance by ~60% using Redis caching and async optimization.
- Designed ETL pipelines for feature engineering and KYC data ingestion.
- Implemented secure architecture (OAuth2, JWT, AES-256, RBAC, audit logging).
- Deployed containerized microservices using Docker in high-availability environments.
- Mentored engineers on backend systems and AI integration.

Full Stack Developer / Software Engineer,

AELAF Engineering

12/2020 – 12/2023

Addis Ababa, Ethiopia

- Built a multi-provider payment platform supporting 5 telecom operators with 10K+ daily transactions.
- Reduced system latency by ~40% through backend optimization.

- Automated reconciliation workflows, reducing manual effort by 55%.
- Designed secure REST/SOAP APIs with Kafka-based event processing.
- Implemented CI/CD pipelines using Jenkins and Docker.
- Built React dashboards for monitoring and reporting.

Software Engineer, Defense University College of Engineering | Bishoftu, Ethiopia

2017 – 2019

- Developed Clinic Management and University Registrar systems.
- Built backend services and UI modules using Java, Spring Boot, React, and PostgreSQL.

Projects

AI/ML Projects

Agentic Fraud Investigation System (LangGraph)

Built a multi-agent fraud investigation system for KYC validation, sanctions screening, and transaction analysis using LangGraph, with FastAPI and Streamlit interfaces.

RAG Optimization System

Improved domain-specific RAG system using hybrid retrieval, RAG-Fusion, reranking, and self-correction loops, significantly enhancing retrieval quality (MRR, nDCG, accuracy, completeness).

Personal Financial Intelligence Platform (PFIP)

Built a serverless AI financial intelligence system using multi-agent orchestration and structured LLM validation to improve grounding and reduce hallucinations.

Afrigate — Trade Compliance Workflow

Developed an AI-driven trade compliance system using LangGraph orchestration and LangSmith evaluator loops for iterative reasoning improvement.

Bati Bank Credit Scoring MLOps Platform

Built a production BNPL credit scoring system using RFM features, K-Means labeling, and XGBoost with FastAPI serving, MLflow tracking, and automated retraining, achieving <200ms latency and 99.9% uptime with SHAP explainability.

Education

M.Tech. Computer Engineering — Defense University (2019–2021)

- MSc Thesis (Distinction) Amharic Character Recognition and Translation using Deep Learning

B.Sc. Information Technology — Mekelle University (2011–2016)

Certificates

Training & Certifications [↗](#)

Andela AI Engineering Bootcamp Top 9% (2026) 10-week program focused on production-grade AI systems, LLM orchestration, and RAG optimization.

10 Academy – Kifiya AI Mastery Program — Distinction (2025–2026) 12-week intensive program covering Generative AI, Machine Learning, Data Engineering, and MLOps. Built multiple production-style systems, including RAG pipelines, ML risk scoring, and evaluation-driven workflows.
